Projects

New News | *Python, Flask, SQLAlchemey, HandleBars* — February 2024 – Present
- Developing a full-stack web application using Python and SQLAlchemey to serve data to the front-end and Database back-end.
- Incorporated Handlebars to build the front-end of the application.
- Used Flask To all CRUD methods to write to the database.

Liber | *React, Node.js, Mongodb, Graphql, Three.js* — December 2023 – February 2024
- Developed a full-stack web application using Mongodb and Graphql to serve data to the front-end.
- Implemented Three.js to create an interactive and immersive reading experience.
- Used Axios to scrape free books from Gutenberg and added them to the database.
- Visualized book data from graphql to allow users to save books to their personal library.
- Designed front-end using react and Material UI

AnyYes | *HandleBars, Node.js, MySQL, Sequelize, JavaScript, Express.js, Multer* — October 2023 - December 2023
- Developed a full-stack web application using MySQL and Sequelize to serve data to the front-end and Database back-end.
- Implemented Handlebars to build the front-end of the application with Bulma to style.
- Used Multer to allow users to upload pictures of the items they want to sell.
- All CRUD methods on the website are enabled using Express.js using routes and controllers.

Experience

Computer Technician — June 2019 – Present
Repair Computers LA — Los Angeles, CA
- Repair Computers that are malfunctioning by replacing hardware.
- Use Bios to check where the error is occurring in the computer to locate the problem.
- Firsthand work building computers from top to bottom using different hardware for the preferred performance.

ATM Business Owner — May 2023 – Present
GD ATMs — Los Angeles, CA
- Establish relationships with business owners to have mutual gains.
- Program ATM machines to run and automate customer support.
- Developed a website for my business that allows customers of my machines to put in service requests and allows business owners to request machines in their stores.
